

## Readout system for delay line detectors with a time stamp TDC and a small angle scattering study of intermolecular interactions in protein solutions

Filesize: 5.65 MB

### ***Reviews***

*Extensive manual! Its such a great read. It really is loaded with knowledge and wisdom You wont really feel monotony at at any time of your time (that's what catalogs are for regarding if you ask me).*

***(Myrl Hintz)***

## READOUT SYSTEM FOR DELAY LINE DETECTORS WITH A TIME STAMP TDC AND A SMALL ANGLE SCATTERING STUDY OF INTERMOLECULAR INTERACTIONS IN PROTEIN SOLUTIONS

To get **Readout system for delay line detectors with a time stamp TDC and a small angle scattering study of intermolecular interactions in protein solutions** eBook, you should access the web link under and save the document or have accessibility to additional information that are highly relevant to **READOUT SYSTEM FOR DELAY LINE DETECTORS WITH A TIME STAMP TDC AND A SMALL ANGLE SCATTERING STUDY OF INTERMOLECULAR INTERACTIONS IN PROTEIN SOLUTIONS** ebook.

Shaker Verlag Nov 2004, 2004. Taschenbuch. Book Condition: Neu. 210x149x14 mm. Neuware - The present work consists of two parts: The first part is a contribution to instrumentation and more particularly the development of a readout system for gas detectors used in small angle X-ray scattering (SAXS) and the second part covers the results of an investigation of interactions between proteins in solution. One aim of the instrumentation part was to investigate the role of fluorescence in gas proportional detector with delay line readout, a phenomenon that leads to events, unrelated to the actual scattering pattern. For this purpose a time stamp (TS-) TDC readout was developed that is able to detect simultaneous events in the detector by using all timing information in the anode and cathode signals (check-sum). It was found that the fluorescence of the gas clearly limits the spatial and time resolution in gas detection. The present observations confirm the influence of argon fluorescence on the point-spread function (PSF) and demonstrate that a rejection mechanism that analyses single events only cannot entirely eliminate these effects. The signal-to-noise ratio can, however, be improved by taking the drift time of the electrons and the check-sum of the signals into account. Drift time measurements are made possible by the unique ability of the TS-TDC to correlate the observation of scattered photons with individual radiation bunches in the storage ring. This feature could also facilitate time-resolved measurements with nanosecond-resolution. In the second part of this thesis gas detectors were used in a contribution to an important topic in biophysics: the study of intermolecular interactions in protein solutions. This was done by measuring the structure factors of protein solutions. According to the DLVO theory the main interactions between spherical particles are the hard-sphere interactions, a short range attraction, due to surface-surface forces,...
