Createspace, United States, 2014. Paperback. Book Condition: New. 203 x 127 mm. Language: English . Brand New Book ***** Print on Demand *****.This book is a way forward towards the theory of everything in physics. True to this gigantic task, the author approaches the subject in a completely new way. The whole theory is based on the concept of zero-postulation, an area where others have been less than successful. The idea of zero-postulation in itself is a tremendous leap in the methods applied in studying sciences. Based on no assumption, this approach is totally based on solid grounds, unlike the other theories in existence. It is a neat and satisfactory description of the world. Over some years now, a large part of the energies of the scientific community has been employed solely for finding a theory that will fit in all known happenings of the physical world. Various groups of scientists have tried to attack the problem from different ends. Some of these theories have been partly successful in explaining the known physical world. However none of these theories have been without shortcomings. Be it the much lauded String Theory or the Quantum Gravity postulation or any other such attempts towards arriving at a Theory of Everything, none have been proved to be foolproof. To say the least, nobody can deny that there is room for much improvement before we can even start thinking truly towards such a theory that would describe the known world satisfactorily and provide for a single basis of understanding the four forces in nature.
